EDUCATION

SKIT JAIPUR

B.Tech in Computer Science (Data Science)

Jaipur, Rajasthan

2023 – 2027

TECHNICAL SKILLS

- Core Languages (Python, C++, JavaScript, R)
- Data Structures & Algorithms
- Database Management Systems (PostgreSQL, MySQL, SQLite)
- Data Analysis (Pandas, NumPy, Scikit-Learn)
- Backend Development (FastAPI, SQLAlchemy, Psycopg2)
- DevOps & Version Control (Docker, Git, GitHub)
- Data Visualization (Streamlit, Apache Superset, Power BI)
- Frontend Development (HTML, CSS, React)

PROJECTS

FleetStat (v1 & v2) | *Python, FastAPI, PostgreSQL, SQLAlchemy, Streamlit, Docker, JWT* v1(2025) v2(2026)

- Engineered a production-ready full-stack web application featuring a secure OAuth2 authentication flow with JWT access and refresh tokens.
- Architected a scalable FastAPI backend comprising over 70+ automated CRUD endpoints mapped across 14 relational database tables using SQLAlchemy ORM.
- Designed data cleaning pipelines using Pandas and deployed a Streamlit interface in v1, yielding a machine learning predictive model with 88% validation accuracy.
- Containerized application services using Docker to facilitate seamless network communication between the React frontend and PostgreSQL database.

TaskPulse | *Python, FastAPI, PostgreSQL, SQLAlchemy, Docker, JWT, React* 2026

- Developed a lightweight, high-utility task management system to implement foundational microservice architectures and state validation paradigms.
- Implemented secure token-based user authentication routines utilizing localized JSON Web Tokens (JWT) inside independent container environments.
- Constructed 10+ operational API routes handling asynchronous request/response operations mapped over User and Task data models with SQLAlchemy.

Portfolio Website | *HTML5, CSS3, JavaScript (ES6)* 2025

- Designed and published a responsive, asset-optimized personal portfolio layout to display technical milestones and interactive coding graphics.
- Leveraged cross-browser compatibility practices and fluid CSS layouts to guarantee consistent rendering parameters across mobile and web interfaces.

EXPERIENCE & INTERNSHIPS

Data Science Intern (In-House)

JUNE – AUG. 2025

Coplur

- Executed hands-on data parsing pipelines using Python, Pandas, and NumPy to preprocess irregular data frames and isolate core trends.
- Designed clean, structured local data storage systems with SQLite and gained functional exposure to Big Data analytics on Databricks cloud nodes.
- Identified anomalous variables and eliminated noise across live files, improving data-cleaning precision for downstream modeling metrics.

CERTIFICATIONS & ACHIEVEMENTS

Certified Data Science Intern — Coplur

AUG. 2025

Data Science & Python Specialist — Infosys Springboard

Data Structures & Algorithms — GeeksForGeeks

Databricks Fundamentals Certification — Databricks Academy
